Scope of application	Dacron polyester/cotton				

Method of use

The process of printing cloth by heat transfer printing

- (1) install a continuous ink supply system for heat transfer printing and check whether the nozzle is normal;
- (2) turn on the machine, set the parameters of the control panel, preheat the ironing machine and adjust the pressure knob to make the plate pressure reach the best state;
- (3) use a printer to output images, which must be mirror images, and then let dry for several minutes;
- (4) to arrange and cut the image, only the outline of the image is needed, so that the image transferred on the cloth is not affected by the transfer paper, resulting in color deviation (this step can be omitted);
- (5) place the cloth to be transferred flat on the machine, and place the printed image flat on the cloth face down;
- (6) press the joystick of plate ironing machine, press it to the end one time, wait for a certain time to pull up the joystick, quickly remove the transfer paper, take out the printed finished cloth.

Thermal transfer printing process for printing hard goods production process

1. Install the continuous ink supply system for heat transfer printing and check whether the nozzle is normal;
2. Open the special stamping machine equipment, the control panel parameters according to the transfer of the item is set to the right temperature is time, the different thermal transfer equipment for different transfer item parameter is not the same, want to combine their own experience, experiment, equipment preheating, adjust the pressure switch at the same time, pressure plate was made to achieve the best condition;
3. The surface of transfer articles evenly spray thermal transfer coating, can be in a sealed, clean environment natural drying, can also choose the right temperature in the oven to accelerate the coating drying, homemade oven can also be used, with an electric furnace plus a sealed space, in short, the coating must be resistant to high temperature.
